PROFESSIONAL SUMMARY

A results-driven Software Developer, graduating in 2026 with a B.Tech in Computer Science, specializing in full-stack and cross-platform mobile solutions. Proven expertise in building scalable backends with Node.js and Express, complemented by intuitive mobile frontends in Flutter. Demonstrated ability to innovate by engineering an AI-powered mobile application that integrates the GPT API to deliver personalized career roadmaps. Seeking to leverage this blend of mobile, backend, and AI skills to build impactful products for a high-growth company.

TECHNICAL SKILLS

- Languages:** HTML5, CSS3, JavaScript (ES6+), Bootstrap, Flutter, Dart
- Core Technologies:** MERN Stack (React.js, Node.js, Express.js, MongoDB), Cross-Platform App
- Tools:** Git, GitHub

EDUCATION

Bachelor of Technology in Computer Science and Engineering

JSPM University Pune

Diploma in Computer Engineering

Sahyadri Polytechnic Sawarde

KEY PROJECTS

Careerly - AI Career Roadmap App

Tech Stack: Flutter, Dart, Node.js, Express.js, MongoDB, JWT, OpenRouter API, YouTube Data API

- Developed a full-stack AI-powered career roadmap application that generates personalized, stage-wise learning paths based on users' goals, skills, and available time.
- Engineered secure backend services using Node.js and Express.js, including JWT-based authentication, roadmap generation APIs, and profile/resume management workflows.
- Designed and integrated MongoDB data models for users, roadmaps, and resumes to support reliable storage, progress tracking, and scalable API operations.
- Built an intuitive Flutter mobile interface with interactive roadmap visualization, skill progress updates, resume PDF import/export, and curated YouTube learning recommendations.

Library Management System

Tech Stack: PHP, MySQL, JavaScript, HTML, CSS

- Developed a comprehensive web-based Library Management System to streamline book borrowing, returns, and catalog management for both librarians and students.
- Engineered the server-side logic using PHP to manage core functionalities, including user authentication, book tracking, and fine calculation.
- Designed and implemented a relational MySQL database to securely store and retrieve all library data, including book inventory and user information.
- Constructed a dynamic and user-friendly interface using HTML, CSS, and JavaScript, enabling features like real-time search for books and interactive forms.

CERTIFICATION

- Software Engineering Job Simulation | J.P. Morgan | January 15th, 2024.
- Introduction to Flutter | DataFlair | July 10th, 2024.
